DETAILED ACTION***Double Patenting***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 21-26 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims of U.S. Patent No. 6,558,651. Although the conflicting claims are not identical, they are not patentably distinct from each other because the examined claims are anticipated by the reference claims, or in other words, claims 21-26 fall entirely within the scope of claims of U.S. Patent No. 6,558,651. Specifically the metered dose inhaler and the method of treating respiratory disorders of instant claims recite a formulation comprising annealed particulate salbutamol sulphate and the propellant. Claims of the reference patent are also drawn to the same metered dose and method of treatment. The difference is that the instant claims additionally recite the limitations of water content and amount of annealed particulate salbutamol sulphate. However, the reference specification defines annealed particulates as having a water content of less than 0.4%, 0.35% or 0.3% (col. 2 and

Art Unit: 1616

claims 4-6). The amount of the particulates of salbutamol is also disclosed as between 0.005 to 10%, and especially between 0.1 and 1% in the specification (col. 3 and claims 7-8). Thus the instant claims are anticipated by the claims of the reference patent in light of its disclosure.
